

Executive Summary

No launch activity this month due to weather delays (to cold and snowy). Instead, I worked on cleaning and organizing my lab. I moved my workbench next to the wall so I could organize my tools. I plan to continue cleaning and organizing next month. I may get some static engine testing done if the weather cooperates.

Technical Stuff

This month, due to weather delays, I worked on cleaning and organizing my lab. I moved my workbench next to the wall so I could organize my tools. Although I knew exactly where everything was, what a mess (before picture). Now, even though it looks a lot cleaner and organized, I won't be able to find anything (after picture).

Next month, more of the same. I may get a few static engine test done. I'm still looking for the minimum solubility point for KMnO_4 infusion into the PLA fuel core. This should reduce waste and make it easier to clean up the area.
